COMPUTATIONAL PHYSICS

Issue	*Page*	
1	v	Announcement: acceptance of programs on magnetic tape.
1	vi	List of editors.
1	ix	Instructions to authors.
1	1	Computing dimensions of irreducible representations of simple Lie algebras. A.K. Bose
2	143	Role of structured programming in physical applications, J. Nadrchal
2	159	An algorithm for generating the positive roots of simple Lie algebras. A.K. Bose
2	163	A study of the electrical conductivity processes in amorphous semiconductors using the computer simulation method. I. One—dimensional case. Z. Rycerz, J. Moscinski
2	169	A study of the electrical conductivity processes in amorphous semiconductors using the computer simulation method. II. Two—dimensional case. Z. Rycerz, J. Moscinski
2	177	A study of the electrical conductivity processes in amorphous semiconductors using the computer simulation method. III. Three—dimensional case. Z. Rycerz, J. Moscinski
2	183	Error analysis of code AROSA for quantal Coulomb excitation calculations. G.H. Rawitscher, C.H. Rasmussen
3	299	The use of first and second derivatives in optical model parameter searches. D.H. Gloeckner, M.H. Macfarlane, S.C. Pieper
3	313	A finite element approach to the computation of the MHD spectrum of straight noncircular plasma equilibria. D. Berger, R. Gruber, F. Troyon

COMPUTER PROGRAMS IN PHYSICS

Issue	*Page*	
1	5	TRANAL: a program for the translation of Symbolic Algol I into Symbolic Algol II. L.G.K. Petravic, M. Petravic, K.V. Roberts
1	27	A program to calculate Green's functions. S.P. Rountree, T. Burnett, R.J.W. Henry, C.A. Weatherford
1	37	ANNA: an interactive program for analysis of one—dimensional pulse—height spectra. P.A. Assimakopoulos, S. Kossionides
1	49	Dipole and overlap integrals between Slater—type functions and continuum Coulomb functions. K.K. Docken, A.L. Ford
1	57	Self—consistent field Hartree—Fock program for atoms. L.V. Chernysheva, N.A. Cherepkov, V. Radojevic
1	75	A program for calculating gamma—gamma directional correlation coefficients and mixing ratios. E.S. Macias, W.D. Ruhter, D.C. Camp, R.G. Lanier
1	95	DWPI: a computer program to calculate the inelastic scattering of pions from nuclei. R.A. Eisenstein, G.A. Miller

COMPUTER PROGRAMS IN PHYSICS (cont.)

Issue Page

1 113 Matrix elements of the reaction matrix in finite nuclei. R.J.W. Hodgson

1 125 Adaptation of CIV3 to evaluate hyperfine structure. R. Glass, A. Hibbert

1 141 RCWFF — a modification of the real Coulomb wavefunction program RCWFN. A.R. Barnett

2 199 Converter of FORTRAN format and data statements to standard form. M. Salem

2 211 A flexible, all—purpose curve—fitting program. E.D. von Meerwall

2 221 Computing a Laplacian field component from boundary observations only. M.J. O'Connell

2 237 A new version of a program calculating the static interaction potential between an electron and a diatomic molecule. F.A. Gianturco

2 249 Quasi—bound state wavefunctions. R.M. DeVries

2 257 Program for optimal computation of EPR spin—Hamiltonian parameters for ions in tetragonal symmetry. A.S. Stefanescu

2 269 Recursive evaluation of 3j— and 6j— coefficients. K. Schulten, R.G. Gordon

2 279 Nonlinear computation of anisotropic elastic fields about straight edge dislocations. P. Petrasch

2 287 Identification of nuclear reactions registered in ionographic detectors. M. Ortega, A. Vidal—Quadras, M. Tomas, F. Fernandez, V. Gandia, C. Jacquot

3 325 Subroutine for calculation of matrix Pade approximants. Y. Starkand

3 331 A simple FORTRAN program to interpret cubic X—ray powder diffraction data. E.D. von Meerwall

3 339 Computation of the anisotropic cubic elastic Green's tensor function and the elastic energy coefficients of point defects in crystals. R.K. Leutz, R. Bauer

3 353 One—dimensional wave packet solutions of time—dependent frictional or optical potential Schrodinger equations. R.W. Hasse

3 363 Non—relativistic form factor program for Compton scattering of gamma rays by bound electrons. F. Smend, M. Schumacher

3 369 BOLTZ: a code to solve the transport equation for electron distributions and then calculate transport coefficients and vibrational excitation rates in gases with applied fields. R.M. Thomson, K. Smith, A.R. Davies

3 385 Calculation of the form of an equilibrium poloidal magnetic field contained in a polytropic star. G.B. Brundrit, M.J. Miketinac

3 397 A program to calculate angular momentum coefficients in relativistic atomic structure — revised version. I.P. Grant

3 407 Erratum notice. Multistate molecular treatment of atomic collisions in the impact parameter approximation. I. Integration of coupled equations and calculation of transition amplitudes for the straight line case. C. Gaussorgues, R.D. Piacentini, A. Salin
